

MC2D-MCG1101

Bjørnøya Basin West

- 8,254 km high-quality long-offset 2D
- 4 × 4 km grid spacing to map prospects
- 10,000 m streamer for excellent AVO
- Acquisition this summer

The map displays the Bjørnøya Basin West with a grid of 4x4 km cells. A large area on the left is covered by a white grid, representing the 8,254 km of high-quality long-offset 2D acquisition. Other areas are marked with brown and red patterns, indicating different acquisition zones or prospects. Prospect symbols, including sun-like icons and red shapes, are scattered across the basin. A legend in the bottom left corner identifies the acquisition areas: a yellow square for MCG1101 and a brown square for MCG0901 & MCG1001. The map also shows various prospect symbols and red shapes, likely representing potential hydrocarbon reservoirs.
